

Pattern when cut out and wrapped around the cyclone cylinder provides a cutting/notching guide.

Cut out the shaded area up to the line but do not exceed it.

If the pattern guideline is not exactly 150mm when printed to A4/Letter then print document again with a custom scale to adjust.

Each segment represents a 5deg section of the 200mm OD cyclone cyclinder. The 65deg shown travels 113.45mm on cylinder exterior

Note that scalling the template to fit a different diameter will result in an inaccurate cut.
